**TRIAL ORDERS RECEIVED
BY APRIL 10th - WILL
RECEIVE PREPAID
SHIPPING ANYWHERE IN
THE U.S., BUT YOU MUST
MENTION "FREE
SHIPPING CODE GC309"
WHEN ORDERING!**

**AVAILABLE IN
1 QUART CAN,
1 GALLON PAIL &
5 GALLON PAIL**

Email us at
Service@Dylon.com
or visit us at
www.Dylon.com

**Can you use a
HIGH STRENGTH
GRAPHITE CEMENT
to bond & repair your
graphite trays?**

**DYLON GRADE GC is a
Superior Joining Compound for All Forms of
Carbon and Graphite**

Dylon scientists have developed a graphite cement that is often stronger than the material joined.

DYLON GRADE GC is a paste that joins carbon or graphite with a 100% carbonaceous bond.

It's easy to use and will greatly reduce the cost of tray replacement.

DYLON GRADE GC

- Permanently repairs cracked, chipped or broken trays.
- Makes large shapes from smaller pieces.
- Great tray repair compound.
- Makes surfaces smooth.
- Joint is thermally & electrically conductive.
- Grade GC will join all kinds of carbon and graphite.
- Good to 3000°C after curing.
- Must be used in inert atmosphere just like regular graphite.
- Bond carbon composites, dies, felt, yarn.
- Repairs spalls, scratches, and holes.
- Fix sight tubes and funnels.
- Cement Flexible Graphite.
- Good binder for carbon cloth, felt and fibers.
